LM ServoMax

Syringe holder

Ouch! Avoid pinpricks

According to the EU's so-called sharps injuries directive, which entered into force in the spring of 2013, an anaesthetic syringe may not be put in the needle guard using fingers but it must be done with an appropriate device. The purpose of the directive is to prevent pinprick and incision accidents in healthcare. The LM-ServoMax tray system can now be equipped with a specifically designed user-friendly and safe needle guard stand for the syringe.

LM 6495

- a stand attachable to the LM-ServoMax tray to place the anaesthetic syringe safely in the needle guard
- conforms to EU directive 2010/32/EU
- safe during the entire treatment procedure
- easy to use and small size
- fits most common needles
- autoclavable

Instruments in order

The LM-ServoMax tray system streamlines the procedure and improves the hygiene at the dental clinic. The new handy instrument racks for the family of products streamlines the use of the tray even further. They can be used to fix even long instruments to the tray and the tray can be filled to maximum. Organising the instruments into procedural sets or for the duration of maintenance is easy and hassle-free.

- rack for attaching instruments to the LM-ServoMax tray
- protects the blades of the instruments and prevents pinprick accidents
- 5 - 9 instruments can be fixed to the rack
- two-level colour coding with bars and code buttons
- length adjustable according to the size of instruments

Colour coding facilitates identification

Racks are available in different bar colours:

LM 6471
black, 2 pcs

LM 6474
red, 2 pcs

LM 6472
orange, 2 pcs

LM 6475
green, 2 pcs

LM 6473
blue, 2 pcs

Code buttons for bars
20 pieces/package

LM 6000 blue

LM 6001 green

LM 6002 orange

LM 6003 red

LM 6004 yellow
